EcoSystem Overview

Growth DeFi provides an advanced suite of products on Binance Smart Chain.

Operating successfully since April 2020, we continue to innovate our ecosystem and build successful partnerships with other DeFi protocols to maximize capital efficiency and returns for our users.

Explore our ecosystem and you'll find ways to earn by staking in our:

- ❖ Virtual Deposit Contracts (VDC)
- ❖ xPERPS Yield farm
- ❖ The Cultivator (delivered in Partnership with EMP Money)

Tokens

xGRO is the core token of the ecosystem and receives revenue from all Growth DeFi products including xPERPS Protocol.

xPERPS is our utility token earned from yield farming, which can be sold for profit or used to boost your positions in our virtual deposit contracts.

xxHMINE is our investment fund token; offering holders dividends from a portfolio of bankroll held assets invested and managed on our user's behalf.

Security

Security is at the forefront of our approach. We have been successfully audited, including by top tier audit firm Consensys Diligence. We believe our proven longevity and investment in this level of security and auditing far exceeds most other DeFi protocols. Links to audits: <https://growthdefi.com/audits>

From the Founder

“Our overarching goal here at Growth DeFi is to create an environment where patient investors can accumulate wealth and take advantage of ongoing streams of passive income. All our systems are interconnected in some way, allowing infinite money loops whereby investors can use dividends from one platform to deposit into another and continue this for as long as they desire. This allows many use cases for each and every one of our tokens”.
